

What is Ecopod?

Ecopod is an easy-to-use refill kiosk about the size of a vending machine that dispenses cleaning solutions and personal care products into refillable containers. Ecopod was patented to reduce plastic pollution by making refill the easy choice for your residents.

How does it work?

To use the kiosk, residents simply place their container in the dispensing hub, select a product, then pay via credit card, cash, or Apple Pay. The product of choice is then pumped through a tube and released into the container. The machine calibrates the amount released based on weight and automatically shuts off when full. It can also be adjusted to fill according to the payment received.

The Ecopod system dispenses up to five products, which are stored in 15-gallon canisters in the back of the module. For larger volume products, 30-gallon canisters are also available. When a canister is running low on a product, the system sends a message to a designated iPhone. The empty canisters can be easily replaced with a full canister by existing employees. Empty canisters are then collected for refilling and redistribution.

We currently offer laundry detergent, fabric softener, all-purpose cleaner, manual dish detergent, and automatic dish detergent. We also have a personal care line with shampoo, conditioner, hand soap, body wash, and baby shampoo. Our products are meticulously formulated to be effective and biodegradable. They are free from parabens, phthalates, SLS, SLES, synthetic dyes & fragrance. Our products are manufactured in the United States, are responsibly sourced and never tested on animals.

The kiosk panels are made of aluminum with plastic buttons and an inlaid flat tv screen, which can be used for promotional or educational purposes. The kiosk measures 48" (depth) x 48" (width) x 74" and weighs about 225 kilograms. We also have a smaller machine available measuring 30" (depth) x 48" (width) x 69" (height). Compatible bottles are ideally 8-10" tall with a 2" opening. Electricity usage is about 120 volts. Ecopod is a patented technology (Patent No. US 9,440,842 B1). See patent [here](#).

Partnering with Ecopod

We're passionate about sustainability. By placing a kiosk at your residential complex, you can reduce plastic waste and boost sustainability, while saving residents time and money. Our kiosks are placed free of charge at your property with 10-15% of profits going back to the property owner, creating a robust new revenue stream.
